EDUCATION

Texas A&M University

Bachelor of Science in Honors Computer Science

Minor in Artificial Intelligence from Mays Business School

Coursework: Data Structures & Algorithms, Database Systems, Design & Analysis of Algorithms, Machine Learning, Software Engineering, Computer Organization, Product & App Development, Business Technology & Innovation, Linear Algebra, Statistics

College Station, Texas

August 2024 – May 2028

Cumulative GPA: 3.9/4.00

PROFESSIONAL EXPERIENCE

Flex (formerly Flextronics)

AI & Technology Intern

Austin, Texas

May 2026 – August 2026

- Reduced engineering feasibility report generation from 9-10 weeks to days via 6-stage agentic Python pipeline using Claude CLI
- Cut AI hallucination ~78% by architecting a transcript-grounded pipeline that prevents the model from inventing unseen parts
- Engineered local-only tools with zero external transmission, enabling deployment inside a security-restricted environment
- Built a full-stack financial dashboard utilizing S&P Cap IQ data from Excel through VBA into HTML interface with custom charts
- Scaled financial dashboard adoption to 150+ employees across 8 business units through intuitive UX and custom reporting

Texas A&M Baseball Analytics Team

Software Engineering Intern

College Station, Texas

January 2026 – Present

- Architected OMAHA across 50+ Flask REST endpoints on Google Cloud Run and Cloud Build CI/CD, used daily by coaches/players
- Cut pitch search time 93% by engineering NLP search across 10,000+ Trackman records using Gemini API and BigQuery
- Unified BigQuery, Cloud SQL, TruMedia, FTP feeds into one real-time system, eliminating manual data pulls for coaching staff
- Delivered hitter heatmaps, catcher framing, and XGBoost Stuff+ by integrating stat models from the data team into production

Cloud 9 Run Club

Head of Technology

College Station, Texas

July 2026 – Present

- Shipped a full-stack app in React, TypeScript, and Node.js, building infrastructure supporting growth of 1,100+ member run club
- Enforced per-user data isolation through 26 PostgreSQL row-level security policies, keeping authorization at the database layer
- Eliminated AI-fabricated data via task-specific Claude API model selection and a deterministic server-side guard
- Automated event check-in for 150+ recurring members via database-trigger-enforced system, eliminating manual lines at events

Sagelyn (formerly DaisyAI, LLC)

Software Engineering Intern

Austin, Texas

March 2025 – December 2025

- Designed a serverless AWS pipeline across Lambda, API Gateway, S3, DynamoDB delivering 5 AI content types to 25+ customers
- Increased published content ~55% by engineering onboarding that captured brand data and injected it into prompt construction
- Expanded platform capabilities by integrating Veo 3, laying the base for AI video generation as new content type for customers
- Achieved 45% faster content generation by structuring a pipeline with detailed prompting, model routing, and response parsing
- Iterated a full-stack React and TypeScript app across sprints, iterating directly from customer feedback to improve retention

PROJECTS AND LEADERSHIP

NFL Prediction AI App

Remote

- Trained a model on 500k+ datapoints, utilized data cleaning, feature engineering, and model tuning to find highest-signal stats
- Achieved 83% accuracy across game outcome, player performance, and matchup predictions; deployed via Flask web app

Engineering Honors EDGE (Enhancing the Development of Global Engineers)

College Station, Texas

- 1 of 35 for a competitive program solving globally significant engineering and technology challenges with industry experts
- Developed cross-disciplinary problem-solving by working across engineering, business, design on real-world tech problems

Aggies in Tech (Business of Technology Certification Program)

College Station, Texas

- 1 of 40 for a competitive program looking at emerging technologies and their technical implementation across industries
- Courses in software architecture, systems thinking, technology adoption, bridging technical execution with business impact

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C++, SQL, HTML, CSS

Frameworks & Tools: React, Node.js, Flask, LangChain, Git, GitHub, REST APIs, CI/CD, Figma, Jira, Tableau, Jupyter Notebook

Cloud & Databases: Google Cloud (Cloud Run, BigQuery, Cloud SQL, Cloud Build), AWS (Lambda, API Gateway, S3, DynamoDB)

AI/ML & LLM: PyTorch, NumPy, Pandas, scikit-learn, NLP, RAG, LLMs, Agentic AI, Claude API, OpenAI API, Google Gemini API
